

AMUWAK

Staff App Training Guide

How to run laundry pickups, pricing and deliveries — step by step, on your phone.

For riders & shop staff

Field Operations · Version 1.0 · June 2026

What's inside

Read it top to bottom for onboarding, or jump to the part you need.

- 1 Welcome & the basics** — what the app is for and the golden rule
- 2 Signing in** — username & PIN
- 3 Your dashboard** — the four tabs and quick actions
- 4 The order journey** — the four stages every order moves through
- 5 Step 1 — Create a new pickup**
- 6 Step 2 — Confirm the pickup & tag the bag**
- 7 Pricing made simple** — weight, rate, special items, settings
- 8 Managing an order** — order details & moving the status
- 9 Step 3 — Hand over (delivery)**
- 10 Everyday tools** — search, notifications, daily report, account
- 11 When something goes wrong** — common messages & what to do
- 12 Coming soon** — what we're improving next
- 13 Quick reference card** — one page to keep handy

1

Welcome & the basics

Five minutes that make everything else easier.

The Amuwak Staff app is your tool in the field. You use it to **pick up laundry from customers, price it, track it through the shop, and hand it back** — all from your phone.

Who this app is for

This is a **staff & rider tool**, not the customer's app. You operate it **on behalf of the customer** — you enter their details, take the photos, and confirm pickups and deliveries with them in person.

Pickups

Create an order, weigh and photograph the laundry, and tag the bag.

Pricing

The app prices each order automatically from weight × rate, plus any special items.

Deliveries

Photograph the hand-over and mark the order complete.

The golden rule

Always confirm with the customer **before**

you tap the final button — the item count, the bag tag at pickup, and the hand-over at delivery. The photos you take are the shop's proof.

Before you start your shift

- Make sure your phone has **internet** — the app needs a connection to load and save orders.
- Allow **Camera** and **Location** permissions when asked (you'll need them for photos and addresses).
- Have your **username** and **PIN** ready (your supervisor sets these up).

2

Signing in

Start of every shift.

- 1 Open the app. You'll see the **Amuwak Staff** login screen.
- 2 Type your **Username**.
- 3 Type your **PIN** (it stays hidden as you type).
- 4 Tap **Login**. The button shows a spinner while it checks.

If a field is empty you'll see **Enter your username** or **Enter your PIN**. If the username or PIN is wrong, a red message appears under the PIN box — check and try again.

Keep your PIN private

Never share your PIN. At the end of your shift,

sign out

from the Account tab (Section 10) so nobody else can use your login.

3

Your dashboard

Home base after you sign in.

The bottom of the screen has **four tabs**:

Tab	What it's for
 Home	Your day at a glance — counts, quick actions, and your assigned orders.
 Orders	The full list of orders as cards. Tap one to open it.
 Report	Today's totals and a status breakdown (Section 10).
 Account	Your profile, Pricing settings , and Sign out .

The Home tab shows

- A welcome header — “**Staff Workspace · Today's laundry operations.**”
- Summary cards: **Assigned**, **Pending pickup**, **In progress**, **Ready for delivery**, and **Completed today**.
- Three quick-action buttons: **New pickup**, **Check order**, **Report**.
- Your **Assigned orders** list.

The  bell at the top-right opens **Notifications** and shows a badge with how many pickups are waiting.

4

The order journey

Every order moves through these four stages, in order.

Stage	What you do	Button you tap
Pending pickup	Go to the customer, confirm the laundry, take photos, tag the bag.	Confirm pickup
In progress	Laundry is in the shop. Once it's clean and finished, set the final weight.	Move to Ready for delivery
Ready for delivery	Take it back to the customer and photograph the hand-over.	Deliver
Completed	Done — nothing more to do. The button shows Order completed .	—

Status always moves forward

An order goes one step at a time and never skips. If you can't find the button to advance, open the order from the

Orders

tab and check its current status chip.

5

Step 1 — Create a new pickup

From Home → **New pickup**.

- 1 Tap **New pickup** on the Home tab.
- 2 Enter the **Customer name** and **Phone** (a 9-digit Ugandan number).
- 3 For the address, type it or tap  **Use my location** to fill it in automatically.
- 4 If the phone matches someone you've served before, a sheet pops up: "**Existing customer found.**" Tap **Use this customer** to reuse their details (and their agreed rate), or **Different customer**.
- 5 Pick the **Service type**: Wash & Iron, Dry cleaning, Iron only, or Wash only.
- 6 Choose **Pickup now** or **Schedule for later** (then a chip like **In 1 hour** or **Tomorrow morning**).
- 7 The **Rate: USh .../kg** line shows the price per kg that will apply.
- 8 (Optional) Tap **Add optional details** for item count, notes, or a **Custom rate** for this customer.
- 9 Tap **Create pickup**.

Before it lets you continue

You must fill

name

, a valid

9-digit phone

,

address

, and a

service type

. A custom rate, if you enter one, must be greater than 0. The

Create pickup

button stays greyed out until the form is complete.

Returning customers

Leaving the custom-rate box

blank

keeps the customer's previously agreed rate — it does

not

erase it.

6

Step 2 — Confirm the pickup & tag the bag

Opens after you create a pickup, or via **Confirm pickup** on the order.

This is the **“Confirm pickup”** screen. Do it **with the customer present**.

- 1 Set **How many items?** using the – / + buttons.
- 2 Take **Photos (up to 3)** — tap **Add photo**. At least one photo is required.
- 3 Enter the **Estimated weight (kg)**.
- 4 Add any **Special items** (e.g. a blanket priced separately).
- 5 Check the **total** — it shows a **“Provisional”** tag until the final weight is set later.
- 6 Tap **Confirm with customer**.
- 7 On the **“Tag the bag”** screen, write the **order number** on the bag (or attach the QR), then tap **Done**.

Good photos protect everyone

Capture the laundry clearly and include anything already stained or damaged. This is the shop's record of what was collected.

Left: confirm details & photos. Right: tag the bag, then Done.

7

Pricing made simple

The app does the maths — here's how it works.

Every order's total is worked out the same way:

$$\text{Weight} \times \text{Rate per kg} + \text{Special items} + \text{Adjustment}$$

The total is never less than **USh 0**. Amounts show in shillings, e.g. **USh 15,000**.

Provisional vs final

At pickup you enter an **estimated weight**, so the total shows a **"Provisional"** tag. When the laundry is finished you set the **final weight** on the order — the tag disappears and the total is locked in.

Which rate is used?

The app picks the rate in this order:

- 1 A **custom rate** you typed for this order, if any.
- 2 The **customer's saved rate**, if they have one.
- 3 The shop's **default rate**.

Frozen at creation

Each order remembers the rate it was created with. Changing the shop default later does **not** re-price old orders.

Editing pricing on an order

Open the order → **Pricing** section. You can set:

- **Final weight (kg)**
- **Special items** (add/remove)
- **Manual adjustment (UGX, +/-)** — a discount (negative) or surcharge (positive)

Then tap **Save pricing**. You'll see **"Pricing saved."**

Setting the default rate

Go to **Account** → **Pricing settings**, enter the **Default rate per kg (UGX)**, and tap **Save**. This is the rate used for new customers who don't have their own.

Handle the default with care

The default rate affects

every new order

for customers without a custom rate. Only change it when you're sure.

8

Managing an order

Tap any order card to open **Order details**.

The Order details screen shows everything about one order:

- A **status chip** (the order's current stage).
- **Customer** — name, phone, address.
- **Laundry details** — order code, service, items, time.
- **Pricing** — rate, weights, special items, adjustment, total, **Save pricing**.
- **Notes** and **History** (a log of what happened and when).

The big button at the bottom changes with the stage:

If the order is...	The button says...
Pending pickup	Confirm pickup
In progress	Move to Ready for delivery
Ready for delivery	Deliver
Completed	Order completed (greyed out)

After advancing you'll see **"Order moved to ..."**. If a save fails you'll see **"Could not save status change — please retry."**

9

Step 3 — Hand over (delivery)

When the order is **Ready for delivery**, tap **Deliver**.

This opens the “**Hand over**” screen.

- 1 Check the **From pickup** card — it reminds you of the item count and how many pickup photos are on file.
- 2 Take **Handover photos (up to 3)** as the customer receives the laundry. At least one is required.
- 3 Add **Notes** if needed.
- 4 Tap **Mark delivered**. The order moves to **Completed**. 📣

Close the loop in person

Photograph the hand-over
while you're with the customer
. It confirms the laundry was returned.

10 Everyday tools

Find orders, stay informed, and check your day.

Search & scan

From Home tap **Check order**. Search by **code, name, phone, or address** in the box, or tap the **scan** icon to read a bag's QR tag. If nothing matches you'll see **"No orders found."**

Notifications

The bell (top-right of the dashboard) lists recent activity — **New pickups** waiting and orders **Delivered in the last 48h** — with the order code, customer, status and time. The badge number tells you how many pickups need attention.

Daily report

The **Report** tab summarises your day: **Orders, Items, Completed**, and **Pending work**, plus a **Status breakdown** bar for each stage. At the bottom: **"Total items handled today."**

Account & sign out

The **Account** tab shows your staff profile, a shortcut to **Pricing settings**, and the **Sign out** button. Signing out asks **"Sign out of this device?"** — tap **Sign out** to confirm. **Always sign out at the end of your shift.**

Check order

Find any order fast — code, name, phone, address, or QR scan.

Notifications

See pending pickups and recent deliveries at a glance.

Report

Know how many orders and items you've handled today.

When something goes wrong

Common messages and what to do.

You see...	What it means & what to do
Could not load orders. Please try again.	The app couldn't reach the server. Check your internet, then tap Retry . If it persists, tell your supervisor.
Could not reserve an order number...	Connection blip while creating the order. Check signal and tap Create pickup again — it won't create a duplicate.
Customer was saved, but the order could not be saved.	The customer saved but the order didn't. Tap Create pickup again to finish it.
Camera permission denied...	Enable Camera for the app in your phone's Settings, then take the photo again.
Could not determine address...	Location lookup failed — just type the address by hand.
Pickup confirmed, but pricing wasn't saved...	Pickup is done, but weight/items didn't save. Open the order and add them in the Pricing section.
Session expired — please sign in again.	You've been signed out for safety. Log in again to continue.
Pricing settings missing — contact admin.	The shop's default rate isn't set up. Tell your supervisor/admin.

When in doubt

Most problems are connection-related. Move to better signal and retry — the app is built to let you tap the same button again safely without creating duplicates.

Coming soon

What we're planning to improve. These are **not yet in the app**.

We're actively improving Amuwak. Here's what's on the roadmap so you know what to expect:

Work offline, sync later

Today the app needs internet to load and save. We're bringing back

offline mode

so you can create pickups and capture proof with no signal — and the app syncs automatically once you're back online.

Role-based permissions

Right now any signed-in staff member can change the shop's

default rate

. We plan to restrict pricing settings to

managers

only.

A dedicated intake screen

Final weight is currently entered on the Order details screen. A purpose-built

intake step

will make weighing finished laundry faster and clearer.

Manage customer rates anytime

A per-customer rate can currently only be set while creating a pickup. We're adding a place to

view and edit a customer's agreed rate

at any time.

Live updates & richer reports

Lists will refresh

instantly

when anything changes, and the daily report will grow into fuller

history and analytics

across days and staff.

Have an idea or hit a snag? Tell your supervisor — field feedback shapes what we build next.

Quick reference card

The whole daily flow on one page — keep it handy.

1 · Pending pickup

Create & Confirm pickup

2 · In progress

Set final weight

3 · Ready

Deliver

4 · Completed

Done 

Create a pickup

- 1 Home → **New pickup**
- 2 Name, phone, address ( or type)
- 3 Service type + now/schedule
- 4 **Create pickup**

Confirm pickup

- 1 Item count + **photo**
- 2 Estimated weight + special items
- 3 **Confirm with customer** → tag bag → **Done**

Finish & deliver

- 1 Open order → set **Final weight** → **Save pricing**
- 2 **Move to Ready for delivery**
- 3 **Deliver** → handover photo → **Mark delivered**

Pricing in one line

Weight × Rate + Special items + Adjustment

Remember

Confirm with the customer before the final tap. Take clear photos. Sign out after your shift.
